

```

1  #include <stdio.h>
2  #include <regex.h>
3
4  int main() {
5      regex_t regex;
6      char S[100];          // Input string
7      int result;
8
9      // Predefined regular expression
10     char R[] =
11     "^(?=.*[0-9])(?=.*[^a-zA-Z0-9]).{6,}$";
12
13     printf("Enter input string: ");
14     scanf("%s", S);
15
16     // Compile the regular expression
17     result = regcomp(&regex, R, REG_EXTENDED);
18     if (result != 0) {
19         printf("Regex compilation failed\n");
20         return 1;
21     }
22
23     // Match input string with predefined regex
24     result = regexec(&regex, S, 0, NULL, 0);
25
26     if (result == 0) {
27         printf("Match Found\n");
28     } else {
29         printf("No Match\n");
30     }
31
32     // Free allocated memory
33     regfree(&regex);
34
35     return 0;
36 }

```
